- Fill in one or more fields and press search. , and if you want to search again you can always reset the search if you press
- It is possible to search the fields: Substance name, CAS-number, type of product and function. When entering data in several fields the information is combined in the search.

Stofnavn Substance name	CAS nr.
<input type="text" value="Phenol"/>	<input type="text"/>
Produkttype Type of product	Funktion Function
<input type="text" value="Alle"/>	<input type="text" value="Alle"/>

The easiest way to search is to write a CAS number, and you will get all records of surveys, in which this chemical has been found.

It is also possible to search type of product, but all the names of different products are in Danish, and you therefore has to translate the name of the type of product you wish to search.

It is important to note that there isn't a recorded function of all substances. When you search on function, the resulting substances only represent a subset of all possible substances which have this function.

If you enter the beginning of a substance name, the names beginning with this letters will appear on a list. If you enter the beginning of a CAS number, all substances beginning with the entered values will be displayed. If you want to search on a CAS number which includes the number 80, you write% 80.

- In addition, there may be ticked in the three fields environmental assessment, health assessment and screening.

<input type="checkbox"/> Miljøvurdering Environmental assessment	<input type="checkbox"/> Sundhedsvurdering Health assessment	<input type="checkbox"/> Screening
--	--	---

If you tick the box in either one of these you will only get those substances, which have been through a health assessment, an environmental assessment or which are detected by screening.

The quantitative amount listed, when the substance has been found through screening, both reflect a semi-quantitative screening result or a later quantitative study of the screened material.

- If you check the "search with brief description" **Søgning med kort beskrivelse**, the brief overview of the search appears, and you can through this tap into the detailed description.

Stofnavn Substance name	Produkttype Product	Mængde Amount	Henvisninger Link
Phenol	Lamineringsmateriale	12-269	Kortlægning og s..
Phenol	Glimmerlim	0,054	Kortlægning og s..

If there is no check mark in "search with brief description", the search will show the detailed overview of all substances.

- In the last column you will find a link to the survey. Here you will find the report in Danish, but if you note the number of the survey, you will be able to find it in English at this page: http://www.mst.dk/English/Chemicals/consumers_consumer_products/danish_surveys_consumer_products/
