

**Table 1 Results of environmental management work at Coop in 2009 (KF 2009: p. 28-29).**

■ Development in accordance with the objective/achieved objective.  
 ■ Unclear if the objective will be achieved with the current trend.

■ The objective will not be achieved with the current trend.  
 ■ Data or analysis is not possible at present.

Objective	Results 2009
<p><b>Climate impact (wholly owned subsidiary)</b>            Emissions of greenhouse gases from activities in relation to the (inflation adjusted) financial turnover will be reduced by at least 10 percent in 2010 and by at least 40 percent in 2020 compared to 2008.</p> <p>By 2020, the Group will be carbon neutral, by climate offsetting their greenhouse gas emissions.</p>	<p>■ Decrease of 9.5 percent in 2009. Reduced emissions from freight transport, business travel and refrigerants.</p> <p>■ Climate compensation has not yet started. Certification of the Vi Agroforestry Programme in eastern Africa as carbon reduction in 2010 provides a new alternative for carbon offset.</p>
<p><b>Electricity consumption (grocery retail trade)</b>            Electricity consumption per square metre of retail space will be reduced by 10 percent by 2010 and by 30 percent by 2020, compared to 2008.</p>	<p>■ Decrease by 2 percent in 2009. Electricity consumption of comparable units have fallen more, but are offset by an overall reduction in sales areas and a higher proportion of cold storage and refrigeration in stores.</p>
<p><b>Transport (grocery retail trade)</b>            Total diesel consumption for freight transportation will be reduced by 10 percent by 2010 and by 30 percent by 2020, compared to 2008.</p>	<p>■ A decrease of 7 percent for freight from the terminals to the store. Switching from trucks to Coop trains was initiated during the year. New logistics solution requires comparisons that include transportation into the terminal in the future.</p>
<p><b>Waste &amp; Recycling (grocery retail trade)</b>            The amount of recycled waste within each fraction should increase by 10 percent in 2010 compared to 2008, measured in tonnes.</p> <p>Physical destruction, measured as a percentage of sales, will have decreased by at least 10 percent in 2010 compared to 2008.</p>	<p>■ The amount of recycled waste from terminals decreased, mainly due to the increased use of a return system with plastic crates. An analysis of waste and recycling issues will take place in 2010.</p> <p>■ Unchanged 1.5 percent. Participation in research projects to reduce food waste in the entire chain from the farm to the table.</p>
<p><b>Range (grocery retail trade)</b>            Coop shall be the leading grocer in terms of the range and sale of organic and fair trade products.</p> <p>Sales of organic food as a proportion of total food sales must be at least 10 percent by 2012.</p> <p>At least half of all sales of organic food in grocery stores will take place within the consumer cooperative movement stores.</p>	<p>■ We have the largest range and highest proportion of sales of both organic and fair trade products.</p> <p>■ Increase from 6.2 to 6.7 percent of food sales. To achieve the objective it is likely to require product development within categories of high sales volume.</p> <p>■ We own approximately 40 percent of eco-sales. Strong growing eco-market, making the objective difficult to reach, despite a double eco-share when compared to the market average.</p>
<p><b>Members and owners (all consumer cooperative movements)</b>            The percentage of members who are in favour of membership in the consumer cooperative movement should be at least 70 percent by 2010.</p> <p>The percentage of members who believe that the consumer cooperative movement lives up to the idea of creating financial benefits and contributes to sustainable development for its members must be at least 70 percent.</p>	<p>■ Increase from 61 to 65 percent. Requires even stronger development in 2010 to reach the objective.</p> <p>■ 59 percent at the first-year follow-up by the Membership Panel. Higher values for financial benefits (61 percent) than for sustainable development (57.5 percent).</p>
<p><b>Employee Relations (all companies)</b>            The percentage of employees satisfied with their work situation and pleased with the sustainable development performance should be at least 70 percent by 2010.</p>	<p>■ Last employee survey 2008. The next survey shall be carried out in spring 2010.</p>
<p><b>Business partners (wholly owned subsidiary)</b>            All companies within the Group shall place high demands on environmental and social responsibility for the selection of suppliers, partners and investments, and follow up the requirements compliance.</p>	<p>■ A supplier policy, which includes environmental and social responsibility is in place or being developed in all companies. However, the monitoring of compliance varies. Review conducted by each partner in the MedMera programme. New ethics policy for investments.</p>
<p><b>Social Relationships (all consumer cooperative movements)</b>            The consumer cooperative movement's collection of contributions to the "Utan Gränser" aid collection initiative and the Vi Agroforestry Programme should increase by at least 10 percent in 2010 and by at least 30 percent in 2020 compared to 2008 (adjusted for inflation).</p>	<p>■ Minus 0.4 percent. Increased collection through automatic rounding up, reduced collection through shopping bags. At the same time, we increased the collected funds to the Vi Agroforestry Programme by 7 percent.</p>
